- Standard Minimum Die Cutting Width: Depends upon flex die layout
- Standard Maximum Die Cutting Length: 15"
- Standard Maximum Operating Speed: Variable 0 – 50 FPM
- Standard Operating Voltage: 115V 60 Hz single phase power
- Standard Unwind Stand: for 14" roll with manual braked unwind tension
- Standard Waste Matrix Rewind: For 14" roll
- Standard Finished Product Rewind: For 14" roll

The DigiFlex ProCut EZ-10 provides the capability to auto-register, is equipped with servo technology, and is a modular rotary and laminating die-cutting machine. All of which; makes finishing digital printed labels easy and cost effective.

This press is designed to take pre-printed material and automatically position the rotary die and cut material in registration with the printed images to be finished quickly and economically. The standard ProCut EZ operates with a non-removable magnetic rotary die-cutting cylinder and utilizes economical flex dies. This modular machine as designed, allows for various options to meet the final product requirements. The ProCut EZ offers great performance often found in much larger and more expensive finishing systems. With this piece of equipment, label finishing and laminated doesn't get any easier.

The DigiFlex ProCut EZ-10 is the perfect finishing and laminating machine for finishing digitally pre-printed webs from machines such as the Primera CX1200 and CX1000, Memjet, Speed Star 3000, Rapid Label System X1, Colordyne 1600, Oki 510, A4 Digital, EFI Jetrion, Epson Sure Press, and the Isys 1290 and Edge 850 digital printing presses.

For use with printed media from the following printers:

730 Red Iron Rd, Black River Falls, WI 54615 USA
